Change Healthcare Ransomware Attack (2024)

Student: Gagandeep Singh

Course: Secure Coding and Testing

What Happens?

- Major ransomware attack in 2024
- Healthcare payment systems shut down
- Pharmacies and hospitals affected
- Millions of patients impacted

Where Did the Organization Go Wrong?

- Stolen employee login credentials used
- No multi-factor authentication (MFA)
- Weak access controls
- Poor cybersecurity preparation

Ethical Issues

Sensitive patient data at risk

Healthcare services disrupted

Failure to protect personal information

Ethical duty to protect patient safety

What Should They Have Done Differently?

- Enable multi-factor authentication
- Improve access controls
- Regular security audits
- Employee cybersecurity training
- Incident response planning

Conclusion

One security weakness caused major damage

Cybersecurity is critical in healthcare

Prevention is better than recovery

Thank You
